

Petra Fuel System Cleaner

PN 2002B 12 FL OZ (355 mL)
Technical Data Sheet

Product Description:

Deposits can accumulate in gasoline-powered engines due to low quality or unadditized fuels and from certain types of driving patterns. This can lead to poor drivability, loss of power, lowered fuel economy, engine "rap" or other noises, dirty fuel system, decreased acceleration and exhaust valve sticking. This is especially true in newer, Gasoline Direct-Injection engines which tend to accumulate performance-robbing deposits more quickly than the port-fuel injected engines they are replacing. Petra Fuel System Cleaner can prevent and eliminate these problems. Petra Fuel System Cleaner is specifically formulated to clean fuel systems, reducing combustion chamber, intake valve. It also helps to restore lost engine power.

Features and Benefits:

- Specifically designed to be used with Petra Intake System Cleaner equipment
- Restores "like new" performance to high mileage engines
- Improves fuel economy
- Minimizes exhaust emissions
- Contains highly effective detergents to thoroughly clean fuel injectors, throttle bores, intake manifold/runners, and combustion chambers
- Improves power
- Improves drivability by helping reduce surging, stumbling, hesitation, stalling and rough idling
- Helps improve acceleration
- Helps restore engine performance
- Safe for Catalytic converter and oxygen sensor
- Use once a year or every 15,000 miles

Typical Properties:

Color	Light yellow
Density @68°F/20°C	0.8707
Lbs/Gal	7.25
Flash Point, PMCC	87°F (30.5°C)
Basic Nitrogen, %wt.	0.047%
